What is the credativ Security Filter?

The credativ Security Filter is an anti-virus and anti-spam filter which is based entirely on Open Source software while meeting the highest industry standards.

Is it possible to simply integrate the credativ Security Filter into my existing infrastructure?

Yes. The credativ Security Filter has an open architecture and is also extremely scalable, so it will fit seamlessly into your existing infrastructure and all established mail platforms.

What types of spam-prevention techniques does the credativ Security Filter offer?

credativ will tailor techniques to your individual requirements. The Security Filter itself is configurable with 'state-of-the-art' anti-spam protection techniques, for instance grey listing, RBL, statistical rules and automatic training systems such as the Bayesian filter are all standard in the credativ Security Filter.

Is the credativ Security Filter continuously updated?

Yes. The Security Filter is maintained and expanded on an hourly basis. By choosing Open Source software, new methods, updates and expansions are integrated quickly and at minimum cost.

Is the credativ Security Filter suitable for large-scale mail systems?

Yes. credativ developed its Security Filter initially for large scale mail systems and it is the ideal solution for medium to large scale enterprises, the public sector and security providers.

Are support levels for the credativ Security Filter comparable to those available for proprietary solutions?

The Open Source developers and experienced administrators at credativ's Open Source Support Center offer comprehensive service and support for the credativ Security Filter and all Open Source software. Our clients receive high level support: 24 hours a day, 7 days a week.
