Groupware solutions

Backup service

Are you looking for the newest technical solution?

We have you covered!
Not only can we recommend numerous Open Source projects, we also use them to create custom solutions for our customers.

What does your infrastructure need?

• High availability database clusters
• Mail systems with extraordinary scalability
• Highly effective anti-spam and anti-virus protection
• One monitoring-system that provides the complete package for your IT-infrastructure
• Software engineering solutions, especially for software configuration management
• A solid and safe groupware solution that also includes mobile devices
• The most suitable backup solution for your individual situation

We have the perfect solution for you!

Open source projects like PostgreSQL, Pacemaker, Postfix, Amavis, SpamAssassin, ClamAV, Puppet, Ansible, CFEngine, Bareos, Icinga and Nagios are just a few of the numerous, reliable Open Source components, that we use as a part of our solutions.

Naturally all our solutions will also be supported long-term by our Open Source Support Center. If needed we do not only provide additional professional support, you can also have us run your complete system.
